Project Report

Task 1

I created my digital literacy infographic using Canva, a user-friendly design tool that offers a wide variety of templates and visual elements. The design presents key aspects of digital literacy in a simple and visually engaging format. It includes sections on the meaning of digital literacy, useful digital tools for students, safe internet practices, professional online presence, and email etiquette. Each section is supported with icons and short bullet points to make the content easy to understand at a glance.

The infographic uses a clean layout with balanced colours and readable fonts to ensure clarity and visual appeal. I focused on making the information concise so that students can quickly grasp the important concepts without feeling overwhelmed.

One challenge I faced while creating the design was selecting the right layout and organizing the content effectively within a single page. However, this process helped me understand the importance of visual hierarchy and simplicity in communication. Overall, this task was interesting as it improved my design skills and awareness of digital responsibility.

Task 2

I created accounts on GitHub, LinkedIn, and Kaggle as part of building my digital portfolio. GitHub is a platform used for hosting and managing code, where developers can store projects and collaborate with others. I plan to use it to upload my Python projects, track my progress, and contribute to open-source work. LinkedIn is a professional networking platform that helps students connect with industry professionals and showcase their skills and achievements. I have added my education details and will continue to build my profile by sharing certifications and projects. Kaggle is a platform mainly used for data science and machine learning, where users can work on datasets and participate in competitions. I plan to use Kaggle to practice data analysis and improve my problem-solving skills.

Over the next four years, I aim to actively use these platforms to build a strong online presence, enhance my technical skills, and prepare for internships and job opportunities. These platforms will help me learn continuously and stay connected with the professional community.

Task 3

I used Google Forms and Google Sheets to create a Digital Literacy Awareness Quiz for my batch mates. Google Forms is an easy-to-use platform for designing surveys, quizzes, and feedback forms, while Google Sheets automatically stores and organizes responses in a structured format. I created a quiz with five questions, including multiple choice and short answer types, to test basic knowledge of digital literacy, safe internet practices, and professional communication.

Through this task, I practiced creating interactive forms, designing questions, and linking responses to a spreadsheet for analysis. I also learned how to share forms using links and manage collected data efficiently.

These tools will be very useful in my academic journey. I can use Google Forms for conducting surveys, collecting feedback, and organizing quizzes for group projects. Google Sheets will help me

analyze data, track progress, and manage information effectively. Overall, this activity improved my understanding of digital tools and their practical applications in education.

Task 4

A common example of poor digital communication is when a student posts inappropriate or offensive content on social media without considering its impact. For instance, a student might share a joke or comment that is misunderstood and ends up offending others, leading to conflicts or even disciplinary action. In some cases, such posts can harm a student's reputation and affect future opportunities, such as internships or placements.

This situation could have been avoided if the student had thought carefully before posting and considered how others might interpret the content. Practicing responsible digital behavior, maintaining respect, and reviewing posts before sharing are essential steps. Additionally, understanding the importance of a professional online presence can help students avoid such problems and use social media more positively and effectively.

Task 5

While researching cybercrime, what surprised me the most was how easily people can fall victim to online fraud, especially UPI scams, simply by approving a payment request or sharing an OTP without realizing the consequences. Many of these attacks do not involve complex hacking but rely on human error and lack of awareness. I also found it alarming that fraudsters use simple techniques like fake calls or messages to create urgency and pressure victims into making quick decisions.

As a result of this research, one habit I will personally change is being more cautious before approving any online transaction or clicking on links. I will always verify the source of any request and avoid acting in a hurry. This awareness will help me stay safer online and protect my personal and financial information.
